· ACCA-qualified finance professional
· Approximately 15 years' experience across South Africa and the UK
· Financial management, reporting and governance

The wider team includes software engineers in Somalia and the United States, working in backend and full-stack development, databases, Python automation, cloud development and user experience.

TECHNICAL AND FINANCIAL CAPABILITIES

Engineering: web applications, backend services, relational databases, role-based access, integrations, Python automation, cloud deployment, dashboards.

Finance: chart of accounts and posting design, internal controls, reconciliations, audit trails, cash-flow and liquidity analysis, budgeting and management reporting.

PARTNERSHIP MODELS AND WORK PACKAGES

Subcontracting. We deliver a defined work package under a lead contractor's agreement and reporting.

Technical implementation partnership. We act as the local technical partner for a product or platform, adapting, implementing and supporting it.

Joint proposals. We contribute the technical approach, work plan and costs for the Somalia component of a bid.

Consortium participation. We join a consortium with clearly assigned responsibilities, subject to eligibility and procurement rules.

Technology delivery. Systems development, localisation, integration with existing platforms, dashboards and continued technical support.

Financial and operational systems. Internal controls, financial reporting, process improvement, budgeting and governance for programmes and partner institutions.

Research and development support. Digital data collection systems, research coordination, field implementation support, monitoring infrastructure and analytical reporting, scoped to the capacity each assignment requires.

Consortium collaboration. Clearly scoped technical contributions, local coordination and defined project responsibilities within a consortium.

GOVERNANCE

Every engagement starts with an agreed scope, responsibilities and deliverables. Client data remains the client's and access is limited to what the work requires. We do not offer or accept improper payments and we declare conflicts of interest. Our policy framework (code of conduct, anti-bribery and anti-corruption, conflict of interest, data protection, information security, procurement and safeguarding) has been drafted and is under review; drafts are available on request. We claim no ISO certification, accreditation or formal partnership that does not exist.
